

AI & Responsible AI Statement

LAST UPDATED: 8 JULY 2026

How Revenant Systems uses artificial intelligence responsibly — human oversight, privacy and data protection, security review and transparency.

1. Introduction

At Revenant Systems, we recognise the opportunities that artificial intelligence (AI) can provide in building modern software, improving productivity and creating innovative technology solutions.

We believe AI should be used responsibly, transparently and with appropriate consideration for privacy, security and reliability.

This statement explains our approach to the responsible use of AI within our products, services and development practices.

2. Our Approach to AI

We view artificial intelligence as a tool that can support software development, problem solving and innovation.

Where AI technologies are used, we aim to ensure they:

- Support human expertise rather than replace responsible decision-making
- Are used appropriately for their intended purpose
- Are reviewed and evaluated where necessary
- Do not introduce unnecessary risks to users or customers

3. Human Oversight

AI-generated content, suggestions or outputs are not automatically treated as correct.

Where AI tools contribute to development or decision-making processes, appropriate human judgement and review remain important.

We remain responsible for the software, solutions and services we provide.

4. Privacy and Data Protection

We consider privacy and data protection when using AI technologies.

Our approach includes:

- Avoiding unnecessary sharing of personal or confidential information
- Considering what information is provided to AI systems
- Applying appropriate security considerations
- Following applicable data protection requirements

We do not use customer information to train AI models unless explicitly agreed and appropriately authorised.

5. Security Considerations

AI technologies can introduce new opportunities and risks.

When using AI tools, we consider:

- Protection of confidential information
- Accuracy and reliability of outputs
- Potential security implications
- Appropriate review before implementation

AI-generated code, recommendations or content may be reviewed before being incorporated into products or services.

6. AI Within Products Developed by Revenant Systems

Some products or services developed by Revenant Systems may use artificial intelligence features.

Where AI functionality is included, product-specific documentation may provide additional information about:

- How AI features operate
- What information is processed
- User controls available
- Privacy considerations

7. Transparency

We aim to be transparent about where AI is used and how it contributes to the services we provide.

We believe users and customers should understand how technology affects their experience.

8. Continuous Review

AI technology continues to evolve rapidly.

Revenant Systems will continue to review our approach to responsible AI use as technology, best practices and legal requirements develop.

QUESTIONS
